Math Activity
Counting Money

We studied these 2 coins yesterday:

A dime is equal to 10 cents

A nickel is equal to 5 cents

Now we are going to study one more: a quarter = 25 cents

A quarter is bigger than a nickel.
And one quarter is equal to 25 cents.

Look at the 3 coins together. Which one is the biggest? And the smallest?

A nickel A dime A quarter

Let's count the coins:

How many quarters do we need to make 50 cents? _____

50 cents = 2 quarters

How many quarters do we need to make 75 cents? _____

75 cents = 3 quarters

Now you try: drag the pictures to match the right total of cents:

	25 cents
	60 cents
	75 cents
	50 cents
