1. Read and match

Humps enable some animals to store fat for periods of time when resources are scarce.

Large eyes on the front of their heads can help animals gauge distance for attacking prey with precision.

Thick fur provides insulation for animals living in cold climates.

2. Complete the table with a possible function of each adaptation
(To gauge distance for attacking prey / To respond to a sudden threat / to radiate off excess heat)

Adaption	Function
poisonous bite	
large eyes	
long legs
