A Read the text.

Garments Manufacturing Process

Ready-made garments or clothes undergo several processes before they are sent for sale. During the process, raw materials such as cotton, silk or batik are transformed into the wearable garments.

The first step is designing the pattern of the garment. Second is cutting the fabric. The fabric is properly cut into parts according to size and pattern. Next is sewing. All the parts of a garment are joined here to make a complete garment. Then comes inspecting the garment. This process is important to ensure the garments are fault free. After that, the garments go through the process of ironing before they undergo the packing process. Garments are packed in poly bags and finally, face shipment. The wearable garments are then sent to the shops for sale.

B Answer the questions based on the above text.

1 Find a similar word for garment.

_____

2 Name the types of materials made into garments.

_____

C Complete the flow map on the process of making wearable garments.
