Name: Grade: Date: Points: 19/

i.-Listen and choose the correct option (8 points)

1.-What happens if there is earthquake?

what happened if there is an earthquake well most of the people think that if there is an earthquake there is a tsunami but that's not true sometimes you have a tsunami or that people get very scared well some people does other not to but actually happens if there is an earthquake is that houses move for sure

2.- What happens if there is a tsunami?

Well about the tsunamis we can say that if there is a tsunami people die actually it is not certain or that but all that houses are destroyed it depends on the luck but what happens if there is a tsunami is that the ocean moves fast.

3.-What happens if there is a Tornado?

About tornadoes that are not very common and chile it is said that people run to shelters is true sometimes they do that because they have to hide but other say the house are damaged well they are not damaged if they are lucky that is not certain either but what actually happens is if there is a tornado is that winds are stronger than usual

4.-What happens if there is a flood?

What happens if there is a flood well we can't say that all the houses are going to get wet it depends where they are so that's not actually the truth about that people are going to lose their houses it's not true neither because some people loses their houses others not what actually happens if there is a flood is that it rains too much, the rain makes the flood so that is a fact

5.-What happens if there is a hurricane?

What happens if there is a hurricane well with the hurricanes some people say that they're in danger yes they are it's true and also that there is a lot of rain from but what is actually happens is that there is a lot of wind, hurricane are a huge storm that it makes a lot of damage and that brings rain but what happens is that there is a lot of strong winds.

6.- What happens if there is an volcano eruption?

In a volcano eruption some people say that there's a lot of smoke in the air or sometimes there earthquake and people are evacuated But what actually happens It is that there's a lot of a smoke and that pollutes the air so it's really dangerous for the people who live there it depends on the magnitude of the volcano eruption that all the people are going to be evacuated but what actually is true is that there is a lot of smoke in the air

7.- What happens if there is a drought?

If there is a drought certain things that can be actually truth but what some people say there is really hot and there is no food is not true because it is about food or that is really hot it's just that there's no rain it doesn't rain at all if there is a drought.

8.- What happens if there is an avalanche?

If there is an avalanche what actually happens is that some people don't die because sometimes they are not there or others say that people can practice extreme sports which it would be very weird so what actually happens if there is an avalanche is that the snow runs very fast
