DO THE CROSSWORD:

1. It's made of two elements.
2. It's another gas of the atmosphere, but it's a little %.
3. The air is mostly made with this gas. Plants use this gas for photosynthesis.
4. Humans need this gas.
5. Blue gas and smell like fish.
6. Represents the 0,97% of air.

COMPLETE THE SENTENCES WITH THESE WORDS:

smells - oxygen - photosynthesis- colorless - respiration - carbon dioxide - weather - odorless - contaminated - ozone - oxygen

The air is made up of invisible gases. You can't see air because it is odorless, _____ and tasteless when it isn't _____. The air is made of some gases: nitrogen, _____ and other gasos.

There are two very abundant gases: nitrogen and oxygen. Most living things can't survive without _____. For example, we need oxygen to help our bodies get energy from the food we eat.

- Nitrogen it is an _____, colorless and tasteless gas.
- Oxygen: is odorless, colorless and it's soluble at water. We need oxygen for _____.

_____ is important too. This is used for the plants to do the _____. It is odorless, colorless and soluble in water.

There are some gases that aren't very abundant like water vapor (depend on the temperature and the _____), argon and _____. A curious thing is that ozone gas _____ like fish.
