There are many different types of cells, which serve different purposes in how plants and animals function. There are cells that take in nutrients from food and other cells that turn those nutrients into energy. Some cells provide structure to an organism. Other cells can make copies of themselves. Certain types of cells contain organelles. Just like the name sounds, organelles are similar to small organs of the human body and perform specific tasks necessary for an organism to survive.

Match the correct heading to the paragraph

1. Organs in the human body
2. The different functions of cells
3. Parts of the cell

Cells never give structure to something living

1. TRUE
2. FALSE
3. NOT GIVEN?

Organelles are almost the same as organs in your body

1. TRUE
2. FALSE
3. NOT GIVEN?
