Rounding to the Leading Digit to Estimate Product

Example: $345 \times 23 \approx 300 \times 20 = 6000$ (think 3x2=6 and then count the zeros)

Your turn:

$593 \times 23 \approx \quad \times \quad =$

$124 \times 48 \approx \quad \times \quad =$

$365 \times 91 \approx \quad \times \quad =$

$272 \times 34 \approx \quad \times \quad =$

$7\,263 \times 21 \approx \quad \times \quad =$

$1\,299 \times 93 \approx \quad \times \quad =$

$3\,891 \times 232 \approx \quad \times \quad =$
