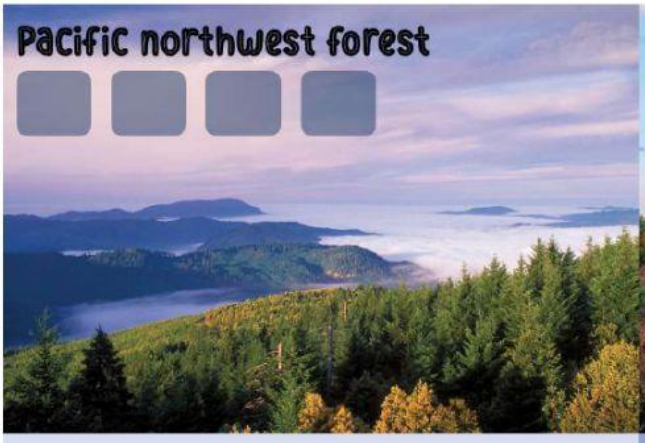
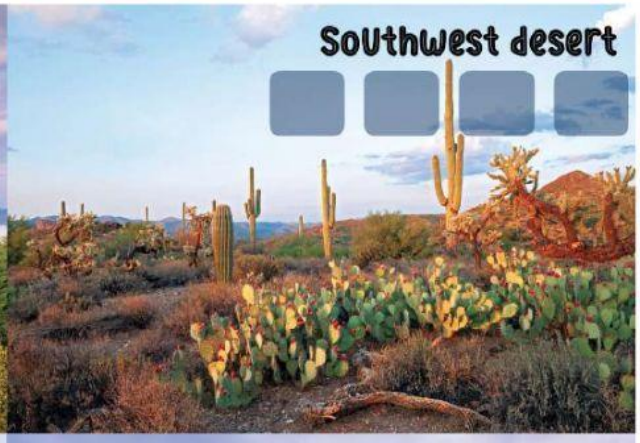
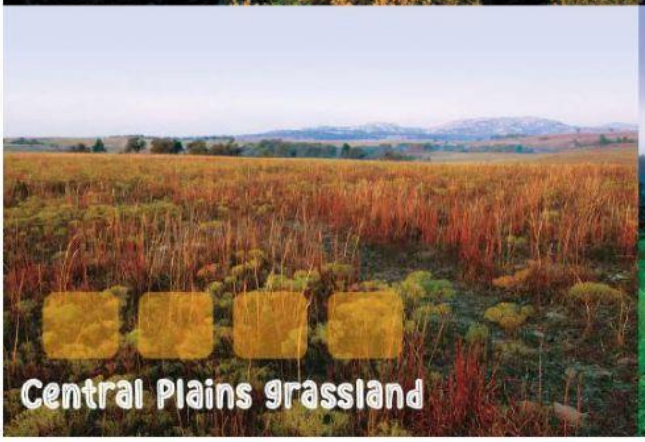
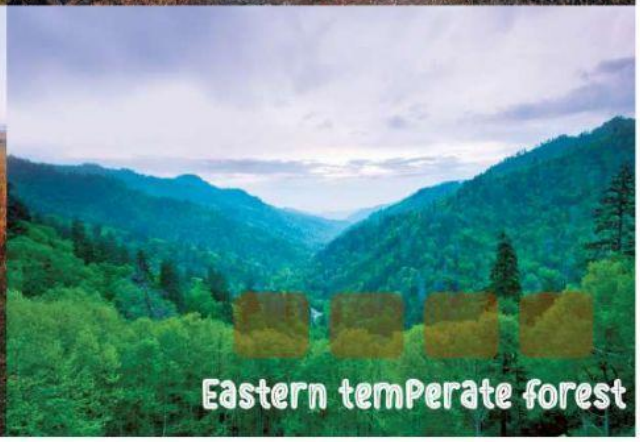
Rainfall and Biomes









Match each characteristic with the correct biome. You have to write only the number of the characteristic. Write them in order from lower to higher.

1 Many flowering shrubs and trees.	**2** Plants that survive with little water.	**3** More rain than the desert, less than the forest.	**4** Mild temperature
5 Very wet environments.	**6** Plants with long roots to absorb and store water.	**7** High temperature	**8** Also known as prairie. Covered in grass and flowers but few trees.
9 Rainy weather. More than 250 cm of rain each year.	**10** Animals live with very little water due to their scaly skin.	**11** Rain and snow throughout the year.	**12** Very little rain.
13 Hot and dry summers and cold winters.	**14** The tallest trees in the world, especially evergreen.	**15** Large leaves of flowers help to absorb the small amount of sunlight that reaches the forest floor.	**16** Most trees are deciduous (lose their leaves in fall and produce new ones in spring).
