TEST: ENERGY (II)

2- Complete the chart with the missing words. Then drag and drop the pictures.

SOURCES OF ENERGY

_____SOURCES

They are replenished naturally. They are infinite and sustainable.

_____

It uses panels to convert sunlight energy into electricity.

_____

It uses wind turbines to convert kinetic energy into

_____

It transforms the kinetic energy of a flow of water

_____

It transforms the thermal energy in aquifers below the surface of the Earth into electricity

_____SOURCES

They are finite and non-sustainable.

_____

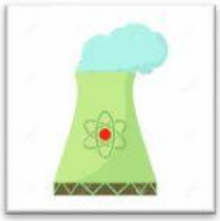
It is a liquid fossil fuel. It is refined from crude oil.

_____

It is a solid fossil fuel. It is burned in power stations.

_____

It is a mixture of gases. It is used for heating, cooking or burned in power stations for electricity.



_____ENERGY

It breaks atoms of uranium to release energy. It doesn't produce air pollution, but it produces dangerous radioactive waste.

_____

Such as ethanol or pellets.They are made of organic waste. They are more sustainable than fossil fuels, but release CO2.
