Summarizing Informational Text-1

Read the paragraph and answer the questions.

1. Julie loves autumn. When she is outside, she breathes in the crisp, cool air. She watches as birds begin to fly south. She enjoys seeing the small animals scurry about collecting the winter food. Her favorite activity is to see the spectacular show in the trees. Where Julie lives, leaves turn bright colors in the fall. It all happens to get ready for winter. Green leaves need chlorophyll to make food. They also need a lot of sunlight. In the winter, there isn't enough sunlight for trees to make food. So, the trees stop making chlorophyll. The green goes away and the colors appear. Red leaves appear because of sugar that the sun turns the bright red. Yellow and orange leaves are just covered up by the green. The brown leaves are from wastes left behind. Isn't it nice of trees to give Julie this beautiful show each year?

   What is happening?

   _____

   When does this happen?

   _____

   Why does this happen?

   _____
