

Name : _____
Class : Amanah

Listen to audio 'Alexander Graham Bell' then choose the correct answers.

Alexander Graham Bell

Alexander Graham Bell was a famous scientist, engineer and inventor. He began inventing things at an early age. His family was very involved in helping speech-impaired people. Both his mother and wife were deaf. His research on hearing led him to inventing and experimenting with hearing devices. One of these devices became the telephone and he was awarded a patent for his invention in 1876. Bell never set out to invent the telephone and he thought it got in the way of the work he truly enjoyed. Bell went on to invent many other things, including one of the first metal detectors. He became the second president of the National Geographic Society in 1898, which prints the National Geographic magazine.
