5TH GRADE NATURAL SCIENCE

Cells are the basic building blocks of all living things. We can classify things as _____ , being formed by one unique cell, or _____ , being formed of numerous cells. The cells of human beings, for example, have many different functions. A number of cells that perform the same function is called _____ . Going up the hierarchy, the next level is an _____ , which is formed of two or more different types of tissue. There are many organs in the human body, but five vital organs are essential to life. The next level on is an _____ Here, various organs work together to carry out a _____ . An example is the _____ system, which allows us to breathe oxygen into our bodies and breathe out carbon dioxide. Organ systems work together to keep us, an _____ , alive.

These words will help you to complete the text. Be careful, some words are extra.

cells *digestive* *function* *multicellular* *organ*
organ system *respiratory* *bacteria* *tissue*
unicellular *organism*
