Biology and Geology Worksheet

The plants. 1º ESO

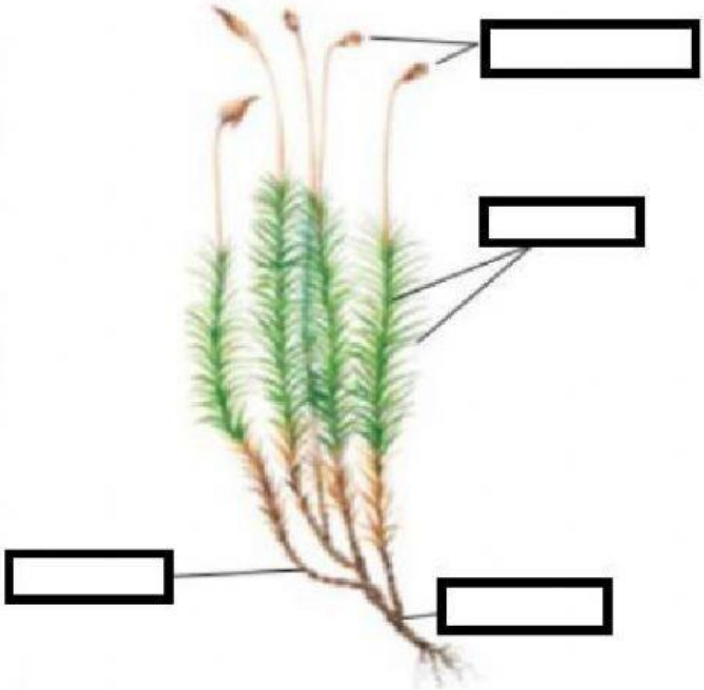
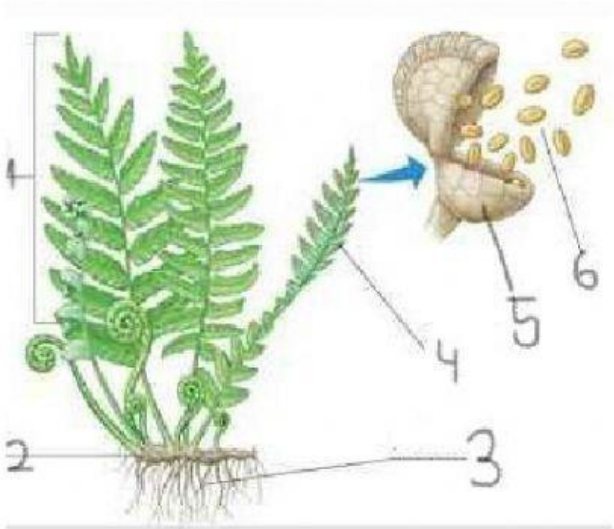
2) Write the parts of a moss:



3) Identify the parts of a fern:



LIVEWORKSHEETS

4) Complete:

- The plant absorbs from the , through the , forming the that is transported by the through the to the . The plant cell has organelles called , which contain a substance called that absorbs . Through the of the leaves, the plant extracts from the air, which joins to and is transformed into , through a process called , in which the plant expels into the air. The carries the from the to the rest of the plant.
- Respiration consists of the transformation of and into and , to obtain energy. Therefore, during respiration the plant takes in and expels through the leaves, contrary to what happens during photosynthesis.
- Photosynthesis only occurs during the , but occurs during the day and night.
