Respiratory System

It's a vital system that enables you to breathe, bringing in oxygen from the air and removing carbon dioxide from your body.

Match the descriptions with the parts of the respiratory system.

It filters, cleans and humifies the air.	It can humify the air and filter some particles.
It's a tube that lets the air pass to the lungs.	They let the air go inside your lungs.
They extract the oxygen from the air.	It helps your lungs expand and contract.
