In 1993, University of Hawaii's anthropologist Ben Finney, who for much of his career has studied the technology once used by Polynesians to **colonize** islands in the Pacific, suggested that it would not be **premature** to begin thinking about the archaeology of Russian and American aerospace sites on the Moon and Mars. Finney pointed out that just as today's scholars use archaeological records to investigate how Polynesians **diverged** culturally as they explored the Pacific, archaeologists will someday study off-Earth sites to trace the development of humans in space. He realized that it was unlikely anyone would be able to conduct fieldwork in the near future, but he was convinced that one day, such work would be done.

Complete each sentence with the correct ending A or B.

1. Ben Finney's main academic work investigates the way that
2. Ben Finney thought that in the long term

A. some sites in space could be important in the history of space exploration.
B. past explorers used technology in order to find new places to live.

Sort elements

some sites in space could be important
in the history of space exploration

past explorers used technology in order
to find new places to live

Ben Finney's main academic work investigates the way that	
Ben Finney thought that in the long term
