Under the sea!

Penguin.
A penguin is a bird and it lives in the Antarctic Ocean.

It has got very short legs and a fat body. It lives on land, but it swims in the sea and catches fish.

FUN FACT: A penguin can walk and swim, but it can't fly.

Octopus.
An octopus lives in the ocean, but it isn't a fish.

It has got a round body and eight long arms, but it hasn't got any legs. It's a fast swimmer and it can hide in tiny places.

FUN FACT: An octopus hasn't got any teeth but it can eat snails.

Seahorse.
A seahorse is a fish, but it can't live in cold water.

It has got a beautiful head, a thin body and a tail, but it hasn't got any legs. It's a very slow swimmer and it hardly ever moves.

FUN FACT: A seahorse can hold onto a plant with a tail.

Starfish.
A starfish isn't a fish. It lives on the ocean floor.

It has got a hard body and hundreds of tube feet on its arms. It can't swim so it walks in the ocean floor.

FUN FACT: A starfish can make itself a new arm.
