The cheetah is a fast, slim, and graceful animal. It is known as the quickest land animal in the world. Its long legs and flexible spine help it run at incredible speed. The cheetah's smooth body and light bones make it perfect for chasing prey.

Its fur is short and spotted, with a yellowish colour that helps it blend into the dry grass. The cheetah has sharp eyes and a black line on its face that looks like a tear. These marks help reduce sunlight and improve its clear vision during the day.

Cheetahs are often found in hot, open areas like wide savannas and dusty plains. They like to hunt during the cooler parts of the day. This smart, quiet, and careful hunter always uses its quick body to surprise its prey.
