Subtract Fractions

Aim: to subtract fractions

Subtract the following fractions. You will need to convert the fractions so they all have the same denominator.

1. $\frac{2}{3} - \frac{1}{2} = \frac{\quad}{\quad}$

   $\frac{\quad}{6} - \frac{\quad}{6} = \frac{\quad}{6}$

2. $\frac{5}{8} - \frac{1}{2} = \frac{\quad}{\quad}$

   $\frac{\quad}{8} - \frac{\quad}{8} = \frac{\quad}{8}$

3. $\frac{3}{8} - \frac{1}{3} = \frac{\quad}{\quad}$

   $\frac{\quad}{24} - \frac{\quad}{24} = \frac{\quad}{24}$

4. $\frac{5}{6} - \frac{1}{4} = \frac{\quad}{\quad}$

   $\frac{\quad}{12} - \frac{\quad}{12} = \frac{\quad}{12}$

5. $\frac{7}{10} - \frac{2}{3} = \frac{\quad}{\quad}$

   $\frac{\quad}{30} - \frac{\quad}{30} = \frac{\quad}{\quad}$

6. $\frac{3}{4} - \frac{6}{10} = \frac{\quad}{\quad}$

   $\frac{\quad}{20} - \frac{\quad}{20} = \frac{\quad}{\quad}$
