MODELLING OF TEXT

Materi : Report Text - Motorcycle Engine (Piston)
Kegiatan : Menganalisis *Generic Structure* dan *Language Features*

A. Tujuan Pembelajaran

1. **Siswa dapat menyusun teks deskriptif tentang Piston**
2. **Siswa dapat menemukan *language features* yang digunakan dalam teks deskriptif sederhana.**

B. Text (Arrange this text and then Translate) Susun teks ini dan terjemahkan!

Piston

The piston is a small metal part inside the motorcycle engine. It is made from light and strong metal, usually aluminum (3)

It is round like a short tube and silver in color. The piston can move up and down easily. Around it, there are small metal rings to stop oil and air from leaking. (1)

The piston's job is to help the engine make power. When fuel and air burn, they make a small explosion, they push the piston down. (4)

The piston then moves the crankshaft through a part called the connecting rod. This movement changes the burning energy into motion, which makes the motorcycle move.(2)

C. Analyze the Text

1. Generic Structure

a. Identification

b. Description

2. Language Feature

a. Simple Present Tense

b. Adjective

c. Action Verb

d. Noun
