Really Different HOUSES

Two billion people live in cities. Most of them live in an apartment.

Another two billion people live around cities. Most of these people live in a house. All the other people live outside cities, in the countryside. Many live on farms. But some live in really different houses.

1

How do people build houses in very cold places? There is only snow and ice. There are no trees. There are rocks, but they are under the ice. An igloo is an ice house. It's made with just ice! An igloo might look cold. But the inside of an igloo is nice and warm.

2

Some people want to live on the water. They can live on a boat. Houseboats are special houses on the water. These houses move from place to place very easily. Ahoy!

3

Some people like to live next to nature. They can! They can build a tree house. A tree house can be small, but there are big tree houses, too! They have everything a normal house has! Now people can live comfortably next to nature!

True or False

1. Most people live in cities.
