"Educamos para el futuro"

Unidad Educativa Arco Iris
PARTIAL TEST
ENGLISH
2022 - 2023
FORM ACD. E # 03

1. **INFORMATIVE DATES**

NAME: _____

GRADE: 5TH **DATE:** _____

TEACHER: Lcda. Ivonne León

QUIMESTER: 1ST **PARTIAL: 2ND**

1. **Read the text.**

The World in the Palm of Your Hand

One of the first telephones was the "candlestick." It had a mouthpiece attached to the top of a stand and a separate speaker that the user of the phone held next to their ear.

The rotary telephone came next. It had the mouthpiece and speaker combined in one handset. People dialed the number by spinning the rotary dial on the front of the phone.

Later, people used a new kind of phone that had buttons instead of a rotary dial. It was much easier and faster to dial numbers.

The next development was the portable, or mobile, phone. The first mobile phone was about the same size as a brick. It was almost as heavy as a brick as well! It weighed over 1 kilogram (about 2 lbs.). The battery only lasted about 30 minutes and took ten hours to charge.

The next kind of mobile phone was called the "clamshell" because it opened and closed like a clam shell. Clamshell phones were very small and light. The batteries also lasted all day and charged quickly.

The smartphone came next. Instead of a tiny screen and tiny buttons, it had a large touchscreen, so you could control it with just your finger. Smartphones became very popular. Now just about everyone enjoys them!

LIVEWORKSHEETS

2. Choose the correct option.

- The first mobile phone was _____ than cell phones today.
- The candlestick had _____.
- After the "candlestick" came _____.
- Phones with buttons were _____ to dial than rotary phones.

3. Read and choose the photo that matches.

- One of the first telephones was the "candlestick." It had a mouthpiece attached to the top of a stand and a separate speaker that the user of the phone held next to their ear.

- People dialed the phone by spinning the rotary dial on the front of the phone.

- Later people used a new kind of phone that had buttons instead of a rotary dial.

- The next development was the portable, or mobile, phone. The first mobile phone was about the same size as a brick.
