You are going to read an anecdote about Albert Einstein. In most lines there is one word that should not be there. It is either grammatically incorrect or does not fit in with the sense of the text.
Read the text and then copy the extra word in the space provided after each line. Some lines are correct. Indicate these lines with an *X*.
The task begins with two examples.

THE PAPER CLIP

Albert Einstein (1879-1955) was a Nobel Prize-winning theoretical	*X*
physicist. He has developed the theory of relativity and published	*has*
lot more than 300 scientific papers along with over 150 non-	
scientific works. Since his great intelligence and originality have	
made up the word "Einstein" synonymous with genius.	
There are several funny stories talked about him but Einstein once	
told to an assistant at Princeton University that the following was	
the most characteristic anecdote that could be told of him.	
Einstein and an assistant, having been finished a paper, searched	
the office for a paper clip. They had finally found one but it was too	
badly bent to use. They looked for an implement to straighten	
it, and after opening many more drawers came upon with a whole	
box of clips. Einstein at least once shaped one into a tool to	
straighten the bent clip. His assistant, puzzled, asked that why he	
was doing this when there was a whole boxful of usable clips	
"Once again I am set on a goal it becomes difficult to distract me," said Einstein.
