.73Population Dynamics: Population Characteristics

The name:

Connect the term with the appropriate definition:

death rate	environmental factor that depends on the population density
logistic growth	environmental factor that affects populations regardless of their density
density-dependent factor	the movement of individuals into a population
density-independent factor	the number of deaths in a given time period
immigration	occurs when a population grows slowly and then stops, following a period of exponential growth
emigration	the movement of individuals away from a population
