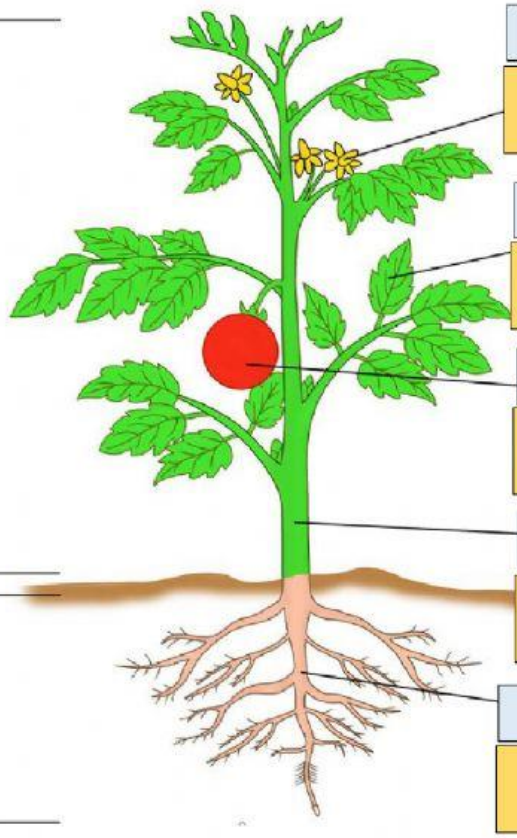
Parts of a plant and its functions

1. Drag and drop.



STEM | FLOWER | ROOTS | FRUIT | SEEDS | LEAF

It helps hold the plant in the soil. The plant takes nutrients and water through them.

It holds the plant upright. It supports it. It holds the leaves upright, too. It carries wáter and nutrients from the roots to the leaves and flowers.

It takes in sunlight. It performs photosynthesis.

It helps in reproduction. It is the part of the plant that makes the seeds.

They contain the plant's embyo. They store food that the embryo will need for germination. They have a protective coat.

It protects the seeds.
