READ AND ANSWER

The confusiusornis was a carnivore because it ate meat. It lived in China 127 million years ago. It was bipedal because it walked on two legs. It was a very small dinosaur.

The confusiusornis had feathers and long wings. It had a beak and sharp claws. Also, it had a long tail and a short neck.

It was smaller than a human's foot. Its tail was shorter than the stegosaurus's tail and it was more beautiful than the T-rex.

China - on two legs - meat - No, it wasn't - Yes - No, it wasn't

1. What did the confusiusornis eat? It ate _____
2. Was it a herbivore? _____
3. Where did this dinosaur live? It lived _____
4. How did it walk? It walked _____
5. Did it have feathers? _____
6. Was it bigger than a human? _____
