Math Assessment

[1] Choose the correct answer:

1) 9.7 ……9.05 [> , < , =]

2) Hexagon has …….. Sides. [5 – 6 – 7]

3) The sum of measures of interior angles of a triangle. = ……..
[60 – 90 – 180]

4) $3\frac{2}{5}$ = ……. (in improper fraction) [$\frac{17}{3}$, $\frac{17}{5}$, $\frac{11}{5}$]

5) The place value of the digit 4 in the number 7.34 is ……
[Units - tenths – hundredths]

6) 38493 ≃ ..... (to nearest 100) [38400 , 3840 , 38500]

7) 17.45 ≃ ..... (to nearest tenth) [17.4 , 17.3 , 17.5]

8) The sum of probabilities of all possible events. = …….
[0 , 1 , $\frac{1}{2}$]

9) $\frac{5}{6} + \frac{2}{3}$ = …… (in simplest form) [$\frac{7}{9}$, $\frac{7}{18}$, $\frac{3}{2}$]

10) The two parallel lines intersect at …….point.
[one – two – zero]

LIVEWORKSHEETS

[2] Complete:

1) A rectangle with length 7 cm and width 3 cm.

Its perimeter = …….. , its Area = ……..……

2) 23.15 + 14.7 = …….. ≅ ……..…… (to the nearest unit)

3) When you flip a coin once, the probability of getting a tail = …….

5) 58.36 – 32.12 =……....≅……..……..… (to the nearest tenths)

6) A square with side length 6 cm.

Its perimeter = ……., its Area = ……..……..

7) 5 m^2 = …….…… cm^2

8) 325471 ≅ ……..…… (to the nearest thousand)

9) Eight and five tenths = ... (in digits)

10) The probability of impossible event =…… ,

While the probability of certain event = ……..…
