REMEMBER

Rules in Division of Fractions

Invert the fraction that you are dividing by — $\frac{4}{5} \div \frac{2}{3} = \frac{4}{5} \times \frac{3}{2}$

Multiply the numerators and denominators — $\frac{4}{5} \times \frac{3}{2} = \frac{12}{10}$

Simplify the fraction if necessary — $\frac{12}{10} = 1\frac{1}{5}$

DIVISION OF FRACTIONS

Rewrite the fractions then drag the correct answer in the yellow box.

1

Invert the fraction

$\frac{2}{3} \div \frac{4}{9} \Rightarrow __ \times __ =$ ☐

reciprocal

2

Invert the fraction

$\frac{5}{3} \div \frac{3}{2} \Rightarrow __ \times __ =$ ☐

reciprocal

3

Invert the fraction

$\frac{9}{4} \div \frac{1}{4} \Rightarrow __ \times __ =$ ☐

reciprocal

4

Invert the fraction

$\frac{10}{7} \div \frac{5}{14} \Rightarrow __ \times __ =$ ☐

reciprocal

5

Invert the fraction

$\frac{5}{7} \div 7 \Rightarrow __ \times __ =$ ☐

reciprocal

5
9
$\frac{3}{2}$
4
$\frac{5}{49}$
$\frac{10}{9}$
