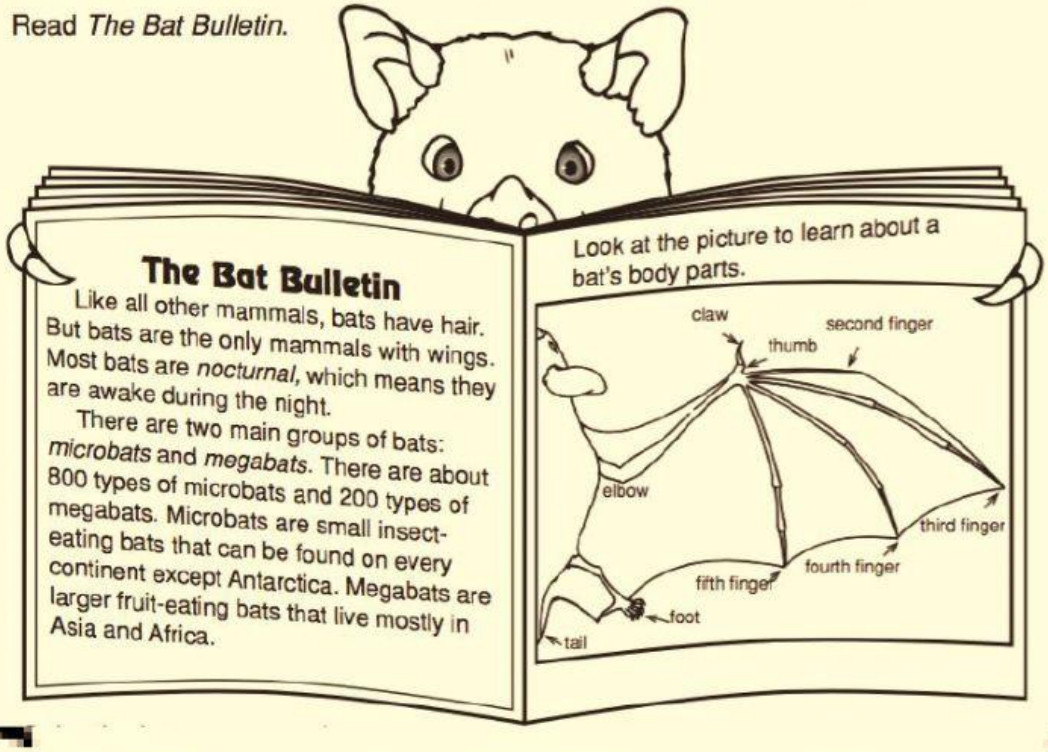
Read *The Bat Bulletin*.



The Bat Bulletin

Like all other mammals, bats have hair. But bats are the only mammals with wings. Most bats are *nocturnal*, which means they are awake during the night.

There are two main groups of bats: *microbats* and *megabats*. There are about 800 types of microbats and 200 types of megabats. Microbats are small insect-eating bats that can be found on every continent except Antarctica. Megabats are larger fruit-eating bats that live mostly in Asia and Africa.

Look at the picture to learn about a bat's body parts.

Write T if the statement is true. Write F is the statement is false.

1. There are more types of megabats than microbats.
2. Bats have the same number of fingers as humans.
3. Megabats live mostly in North America.
4. Most bats are awake during the daytime.
5. It is possible that a microbat may like to eat mosquitoes.
6. A bat has a tail.
7. All mammals have hair.
8. Microbats are larger than megabats.
9. Bats are the only mammals that don't fly.
10. Megabats eat mostly fruit.
