Bonelli Eagle and GREFA story

Read the text and answer the questions

(Esta tarea la corregiré yo, no os preocupéis por la nota hasta que yo lo revise).

Vocabulary:

Rescuer organization: rescatadores

Forest rangers: agentes forestales

Nest: nido

Sick chicks: pollitos enfermos

Power lines/electricity posts: Postes de la luz

Let back into the wild: soltar/liberar

Captivity: cautividad

Feed: alimentar

Bonelli Eagle is an endangered species. This is why GREFA, a rescue organization, **and the Forest rangers are developing a project called Aquila-a-LIFE to take care of these birds.**

An important thing they do is patrol the eagles' nests. When they observe a nest and identify sick chicks they take them to their hospital so they can save them.

Bonelli Eagles are given a GPS device by these group of rescuers to know where they are, how they are and also to learn more about this species.

Also, **GREFA** checks electricity posts and makes sure they are safe. They have volunteers who locate the most dangerous power lines and try to change them.

With those eagles that are taken into the hospital and which cannot be let back into the wild, GREFA breeds new baby chicks in captivity which will be later set free. On the first days when they are free it is very important that **GREFA** feed them and check how they develop.

TRUE OR FALSE

1. GREFA are a group of rescuers. True False

2. **GPS devices** are bad for the birds. True False

3. **GREFA** has volunteers who locate the most dangerous power lines and try to change them. True False

4. Little chicks in captivity which will never set free and fly free.
True False

5. It is very important that the GREFA workers feed the eagles on the first days.

True False

If you want to know more about **GREFA** and their work get on their webs and check them (THEY ARE IN SPANISH =)).
