Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the following questions.

There is one planet that still fascinates and teases scientists mainly because it doesn't have an atmosphere to obscure observation, yet it is not big enough for sufficiently accurate telescopic observation. The fact that it is also very close to the sun also makes it difficult for astronomers.

However, space telescopes have told us a lot more about Mercury. It is rather similar to Earth's moon and to Mars. There are mountainous areas dotted with craters and large valleys which are uncratered. The moon's valleys have fewer cracks and ridges are smoother. Mercury's valleys are filled with volcanic rocks, similar to on the moon, yet there is no evidence of volcanoes, even extinct ones, on Mercury, as there is on the both Mars and the moon, and of course here on Earth.

So, scientists presume the valleys on Mercury were caused by different things, that is to say not by volcanoes, but by very large meteorites, which also caused the cracks in the terrain and left the ridges rough and uneven. More and better photos of Mercury are needed to prove what are at present at best only hypotheses.

Question 13. What is true about Mercury but not true about the moon or Mars?
A. The valleys are filled with volcanic rocks.
B. There are no volcanoes.
C. There are hilly regions.
D. The valleys are uncratered.

Question 14. What is the main topic of this passage?
A. The planet, Mercury **B.** The Earth's moon
C. Observation of planets **D.** Astronomers' difficulties

Question 15. What does the author imply space telescopes can do better than land-based telescopes?
A. show the meteorites which hit Mercury
B. show more of the planet, Mercury
C. show the volcanoes on Mercury
D. show what caused Mercury's valleys

Question 16. What can we infer from the passage that astronomers still need to get more detailed observation of Mercury?
A. More ways to prove hypotheses **B.** More hypotheses
C. Larger space telescopes **D.** Better and more space telescopes

Question 17. Why does Mercury still tease scientists?
A. Because it is too close to the sun.
