IT WORDS WITH T&V&W

10. Choose one word from the options for each blank space.

A : Jay, could you help me out with this?

B : Sure, what's going on?

A : My program asks the user for the year they were born in and based on that it calculates their age. For some reason, I got a crash because the _____ contained the wrong type of _____ – instead of an integer, the year is a string.

B : That's definitely weird. Did you _____ the code yourself or are you using some from the internet?

A : Mmm half and half? I wrote some myself and then brought some from the internet. But, the code I used was said to be _____, so...

B : Well, a lot of people confuse _____ with _____, so I wouldn't give much importance to that. Let's take a look at the code together, maybe a quick _____ will be enough.

A : Yes, we just have to find where the input type is _____ and get rid of it.

B : Yup, right there, line 39. There you've got your problem. Delete that line and _____ it.

A : Oh, looks like that was, in fact, the issue. Thank you!
