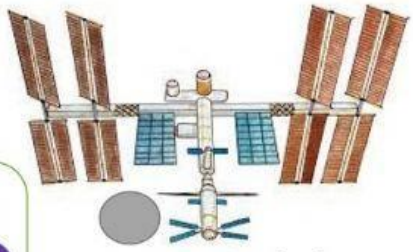
Space technology.

In this worksheet, join the purple spots to the grey spots.

Used to transport astronauts and space probes and satellites to space. This is not an airplane.

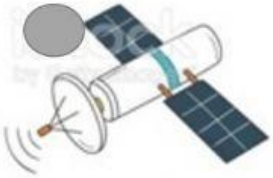


space station (ISS)

This technology is used to receive signals. Normally it receives signals from satellites. It 'listens' to space as relay signals.

antenna

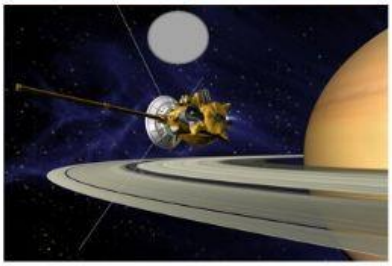
There are many types:
- for looking at the weather
- for communication
- for phones and cars to find their position
- for TV and radio



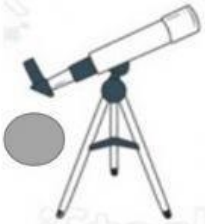
man-made satellite

A space craft (also called space probe) travels to other planets to take photos and learn something about those planets.

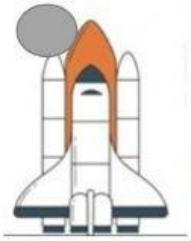
Used to observe the sky and to look at objects in space.



space craft near Saturn.



telescope



rockets and space shuttle

A place where astronauts (scientists) live for up to 6 months. They do experiments with plants and animals to study the effects of gravity
