Application_Grade-6_ Factors, Multiples, Primes and Exponents

An Introduction to Squares and Square Roots

Add and subtract the following square roots.

$\sqrt{225} + \sqrt{49} = \square$

$\sqrt{81} - \sqrt{36} = \square$

$\sqrt{9} + \sqrt{4} = \square$

$\sqrt{1} - \sqrt{81} = \square$

$\sqrt{64} + \sqrt{36} = \square$

$\sqrt{81} - \sqrt{0} = \square$

$\sqrt{289} + \sqrt{9} = \square$

$\sqrt{64} - \sqrt{100} = \square$

$\sqrt{900} - \sqrt{400} = \square$

$\sqrt{25} + \sqrt{9} = \square$

$\sqrt{256} - \sqrt{4} = \square$

$\sqrt{4} + \sqrt{81} = \square$

$\sqrt{81} + \sqrt{144} = \square$

$\sqrt{64} - \sqrt{36} = \square$

$\sqrt{100} + \sqrt{1} = \square$

$\sqrt{64} - \sqrt{49} = \square$

$\sqrt{25} + \sqrt{64} = \square$

$\sqrt{900} - \sqrt{9} = \square$

$\sqrt{484} - \sqrt{81} = \square$

$\sqrt{16} + \sqrt{400} = \square$

$\sqrt{625} - \sqrt{4} = \square$

$\sqrt{324} + \sqrt{36} = \square$

$\sqrt{441} + \sqrt{4} = \square$

$\sqrt{1} - \sqrt{64} = \square$
