	5. The Patas Monkey, from Africa is the _____ primate on Earth. It runs up to 55 kilometres per hour. (fast)

D. Amphibians- Read the text and Write complete answers for each question:

	**Amphibians** are a very interesting type of animal because **they live on land and in water.** Amphibians need to have wet skin, so they need wet places. **They lay their eggs in water.** Young frogs are called tadpoles. They look like small fish and they have no legs. **Young frogs breathe underwater with their gills.** Adult frogs don't have gills. Frogs are a type of amphibian. Most amphibians, like frogs, have legs that help them walk and jump on land. Frogs are carnivores, so **they eat insects like flies and mosquitoes**. **Nobody knows when frogs sleep** because most of the time they have their eyes closed!!

Where do **amphibians live**?	
Where do **amphibians lay their eggs**?	
How do **young frogs breathe underwater**?	
What do **frogs eat**?	
When do **frogs sleep**?
