Circulatory System
Transport **oxygen** and **nutrients** to each cell in your body, and takes waste products like carbon dioxide to the lungs where expels it from the body
The **heart** pumbs blood round the body throught three different types of blood vessel
Blood vessels
Blood
Arteries take the blood from your heartto all parts of your body
Veins bring blood from your body back to your heart
Capillaries connect arteries and veins
Gas exchange: oxygen and carbon dioxide can move between blood and tissue cells in the body
