HEALTH
Competency: Explains the effect of a noisy environment
Code: H6EH-IIId-4

BRIEF INTRODUCTION
Noisy environment is also known as a noise pollution in which it's caused by many vehicles on the road and the noises coming from factories and construction sites. Some of the miscellaneous causes like playing music in loudspeakers, shouting by wanders, etc.

When noise is more than the normal level. it can cause restlessness and anxiety.

Effects of Noisy Environment as follows:

➢ humans- sleeplessness, communication interference, diseases in blood pressure, anxiety, fatigue, nausea, deafness and etc. Noise induced annoyance.

➢ on wild life- noise interferes with prey catching ability of the fishes that uses sound to catch their prey, noise leads to change habitat of various birds small animals like rabbits.

Therefore, environmental sanitation includes keeping environment free from noise pollution so that people in a community and even animals will not be disturbed and free from health problem and diseases.
