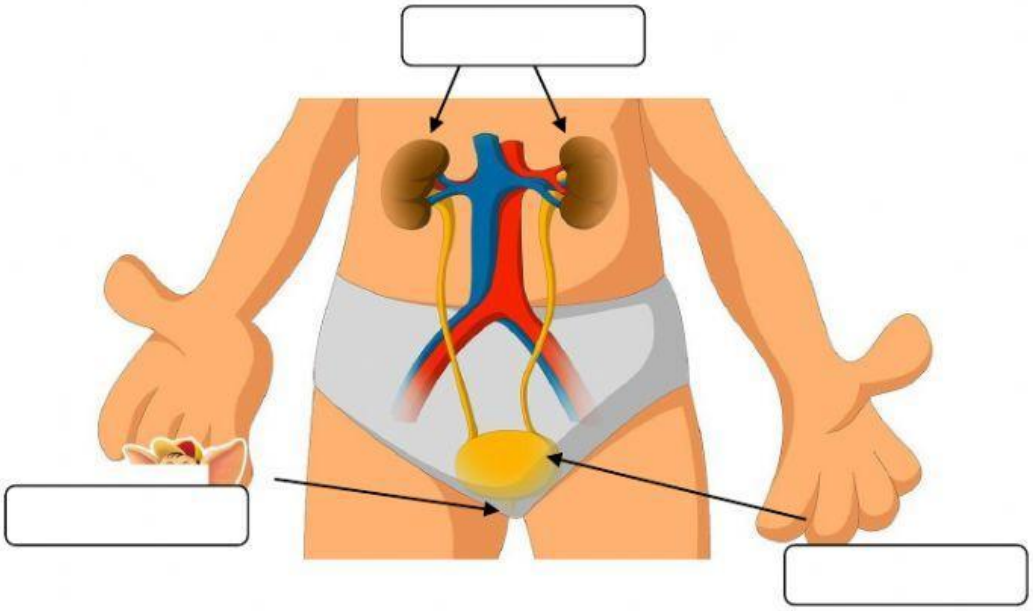
Excretory system

The **excretory system** is a group of organs that help **eliminate waste** from the body.

1. Label the picture.

urethra | kidneys | bladder



2. Order the process of digestion.

- ◯ The waste combines with water to make **urine**.
- ◯ The urine leaves the body through the **urethra.**
- ◯ The **kidneys** remove waste from the blood**.**
- ◯ The urine passes to the **bladder**, where it is stored.

Did you know that the body also eliminates waste through the skin?

This waste is a liquid called **sweat**. We sweat when we get hot.

sweat
