FASHION INNOVATIONS

Fill in the blanks using words from the box:

algae – button– decompose – distressed – fabric –

innovation – jacket – prototypes - striped - thread

Fashion is an industry that is constantly evolving. It's all about _____and creativity. Designers are always trying to come up with new ways to make clothes that stand out from the crowd. For example, some clothing companies have started using sea plants to create _____. Not only can _____ be grown quickly and easily, but it's also biodegradable, which means it will easily _____ when you don't want to wear your clothes anymore!

Another way designers are innovating is by creating _____ using 3D printing technology. This allows them to quickly and easily test out new designs without having to spend a lot of money on materials.

When it comes to actual clothing items, there are many different styles to choose from. You can go for a _____ denim look, or opt for something more classic like a _____ shirt. And of course, you can never go wrong with a basic _____-up shirt or a zippered _____.

No matter what style you choose, one thing is for sure: stitching and _____ play a crucial role in making sure your clothes don't fall apart after just a few wears. That's why projects like "Smart Stitch" can make a real difference!
