Name: _____

Algorithm	A piece of code that repeats itself, so that the same piece of code does not have to be entered multiple times.
Decomposition	A container to store information such as numbers or text. A variable must be named, think of this as the container's label.
Loops	(Brains of computer) Is the electronic circuitry within a computer that executes instructions that make up a computer program.
Associates	A container object that can hold a list of values.
Iteration	The screened area in which an associate reads a scan, retrieves the correct item from the bin, and places it into a yellow plastic box called a tote.
Motion Planning	A method of writing down programming concepts in plain language rather than in code.
Picking Station	The repetition of a process in order to generate a sequence of outcomes.
Processing Unit	A list of steps that are followed to complete a task.
Pseudocode	Planning a sequence of steps that moves a robot, in this case the drive unit from one place to another or raising and lowering its lift.
Variable	Breaking a task down into smaller chunks.
List	The title given to Amazon Fulfillment Center employees who work on the warehouse floor moving, stowing, picking, and packing merchandise for shipping.
