Transformar las siguientes expresiones decimales inexactas en fracciones.

Ejemplo:

$0{,}2\overline{3}333\ldots = \frac{23-2}{90} = \frac{21}{90} = \frac{7}{30}$

$2{,}1\overline{5}55\ldots = \frac{215-21}{90} = \frac{194}{90} = \frac{97}{45}$

$0{,}61\overline{4}44\ldots = \frac{614-61}{900} = \frac{553}{900}$

$6{,}3\overline{24}2424\ldots = \frac{6324-63}{990} = \frac{6261}{990} = \frac{2087}{990}$

Actividad:

$0{,}002444.. = \frac{\square - \square}{\square} = \frac{\square}{\square} = \frac{\square}{\square}$

$0{,}87777\ldots = \frac{\square - \square}{\square} = \frac{\square}{\square}$

$0{,}45555\ldots = \frac{\square - \square}{\square} = \frac{\square}{\square}$

$3{,}26666\ldots = \frac{\square - \square}{\square} = \frac{\square}{\square} = \frac{\square}{\square}$

$0{,}48888\ldots = \frac{\square - \square}{\square} = \frac{\square}{\square} = \frac{\square}{\square}$

$0{,}107777\ldots = \frac{\square - \square}{\square} = \frac{\square}{\square}$

$4{,}35757\ldots. = \frac{\square - \square}{\square} = \frac{\square}{\square} = \frac{\square}{\square}$

$0{,}234444\ldots = \frac{\square - \square}{\square} = \frac{\square}{\square}$

$12{,}88888\ldots = \frac{\square - \square}{\square} = \frac{\square}{\square}$
