Solutions

1. Complete the following information

Solutions are homogeneous mixtures. They have two components:

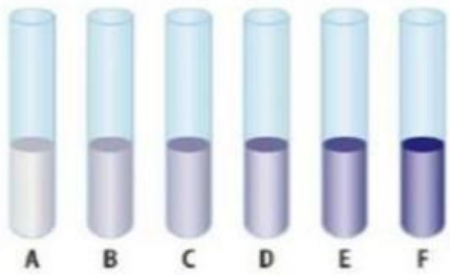
- or dissolved substance
- or dissolving substance

The first one is, in general, in a proportion; while the second one is in a proportion.

Solutions that have quite a high concentration of solute are called .

When the solute concentration is low, they are called .

2. About the image, answer the following questions:



a. Which solution has more solute?

b. Which is the more concentrated one?

c. Which is the more diluted one?
