
b Read the captions from 1 to 7. Write each number in the correct place on your diagram. You may need to write some numbers in more than one place.

1 The Sun gives off heat.

2 The heat warms the water in the ocean. Some of the water evaporates.

3 Living things also give off water vapour.

4 When the water vapour hits cooler air, it condenses into tiny water droplets. These form clouds.

5 Water from clouds falls as **precipitation**. Most often, this is in the form of rain or snow.

6 Some rainwater flows into rivers. Rivers then flow into the ocean.

7 Some rainwater sinks into the ground. Eventually this water flows into the ocean.
