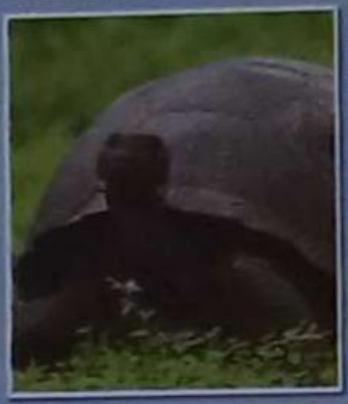
1 Read and complete the chart.

Enjoy your visit to the Galapagos and take care of the islands.

Wash your shoes before you walk on the islands. Don't touch or feed the animals – some are endangered. Don't collect any shells from the beach and don't take plants or flowers. Throw garbage in the garbage cans or take it home with you. Thank you.

Look for these endangered animals:



Giant tortoises
These animals can live from 100 to 150 years old. They're the biggest tortoises in the world. They eat fruit and plants. They're endangered because in the past sailors ate them and today goats eat their food.

Galapagos Penguins
Yes, penguins do live here! Penguins usually live in cold Antarctica. These penguins eat fish from the ocean, but fishermen want the same fish. They're endangered because they can't find food, because there are chemicals in the ocean, and because other animals eat their eggs.

Iguanas
Iguanas are big lizards. They're smaller than giant tortoises, but bigger than dogs. They climb plants and eat the fruits. Some iguanas are endangered here because wild cats and dogs eat them or their eggs.

Animals	Interesting facts	What do they eat?	Are they endangered?
Giant tortoise	*Biggest tortoise in the world*	*Fruits and plants*	*Yes*

2 Ask and answer.

1. Why can't you touch or feed the animals?
2. Which animals eat fish?
3. Which animals did people eat?
4. Which birds are endangered?

It's Sticker Time!

Who is Lonesome George?
