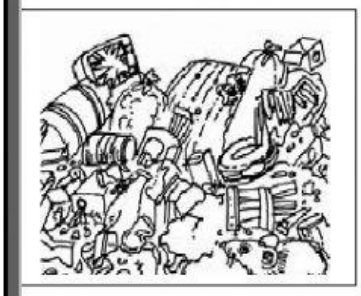
Name : _____

Interdisciplinary Unit

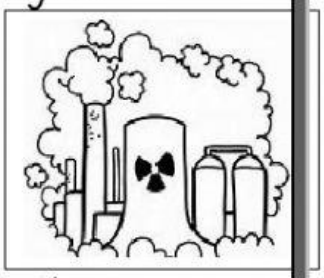
Pollution

Pollution is any unwanted matter that can be added to the air, water or soil. Air pollution is caused when cars, trucks and factories burn fuels. This can hurt people's lungs. Rain combines with air pollution and falls to the ground. This is called acid rain. This pollutes the land and water.



When harmful materials are dumped into the water, this causes water pollution.
People can help keep the air clean. Use buses or trains instead of cars. We should not burn leaves or trash. We can keep the water clean by not dumping garbage into the water.

We can keep the earth clean by having clean up campaigns regularly. We can make less trash by recycling or reusing things. Reuse means to use over again. People can recycle glass, paper, cans to make different things.



Pollution in water and on land makes them dirty, unhealthy and unsafe for humans and other living things. These things that dirty the water, land or air are called pollutants.

LIVEWORKSHEETS

Answer each question.

1. Define the word pollution. (1)

_____

_____

2. How are humans affected from air pollution? (1)

_____

_____

3. What is the term given to polluted air and rain that fall back to the ground? (1)

_____

_____

4. Look at the picture below. What type of pollution is this? (1)

Answer: _____

5. Give TWO ways in which we can prevent this type of pollution. (2)

LIVEWORKSHEETS

6. Look at the picture and explain what can happen to a fish living in this sea. (2)
