Komodo

"The Komodo dragon is the largest living species of lizard, growing to an average length of 2 to 3 meters. These reptiles are native to a few Indonesian islands, including Komodo Island. Komodo dragons have a strong, muscular body, and their skin is rough and covered with scales. Their sharp claws and serrated teeth help them catch prey like deer, pigs, and water buffalo. Although they are fierce predators, Komodo dragons usually avoid humans."

What is the social function of the descriptive text about Komodo dragons?

A. To narrate the history of Komodo dragons.
