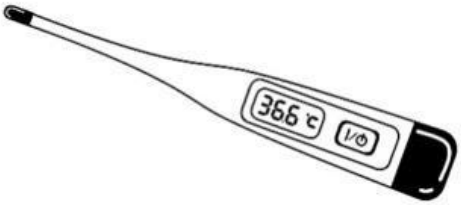
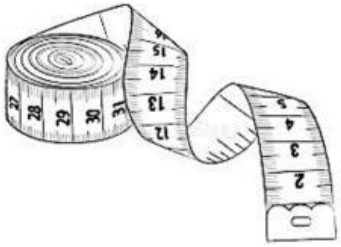
Measuring Tools

A. Write the tools:





B. Choose the correct answer:

1. Why did you use grams to measure rice?

I used grams because they tell us how big the rice is.	I used grams because grams measure weight, and rice is measured by how heavy it is.

2. What would happen if we used liters to measure rice?

If we used liters to measure rice, it would be hard to know the exact weight, because liters are used for liquids, not solid things like rice.	If we used liters to measure rice, it would make the rice heavier.

C. Match the item with the correct unit of measurement. Draw a line.

1. Milk in a glass	Length
2. Height of a tree	Mass
3. Weight of an apple	Volume
4. Duration of a song	Temperature
5. Hot soup	Time
