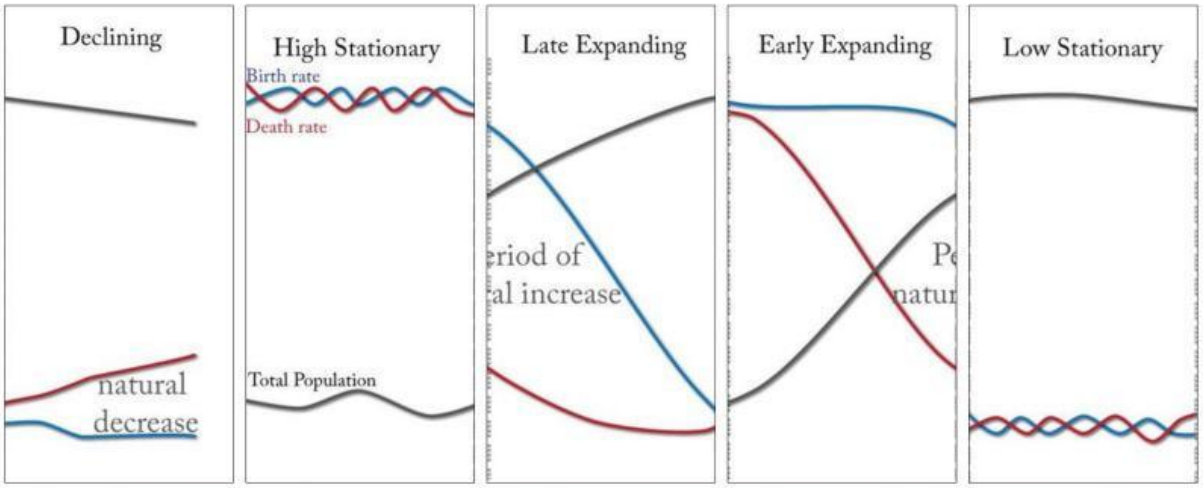
DATE: _____ NAME _____

Teacher: Sergey GROUP F2

Lesson topic: Demographic transition model. Worksheet

GEOGRAPHY

Drag and drop the stages of DTM and their descriptions to match and build the diagram.



*Advances in medical care and vaccinations lead to falling death rates.
*Birth rates remain high as people are slow to believe in the reduced infant and child mortality.
*Rapid population growth.

*Birth rates continue to decline.
*Death rates start to rise due to aging populations and lifestyle choices (smoking, alcohol, lack of exercise). High calorie intake - obesity.
*Population decline.

High birth rates due to high infant and child mortality rates, need for children to support them and lack of contraception/ family planning
High death Rate
Low but stable total population

*Birth rates start falling as the trend of falling death rates continues.
*More people become aware of the importance of family planning and have access to birth control
*Population growth continues but slows

*Low birth rates due to high costs of children, more gender equality and desire/need for careers.
*Low death rates due to good health care, nutritious diets and safer working conditions.
*Stable population.
