TASK 8: WHAT IS MENSTRUATION?

Read and complete the text with the following words

menstruation	ovule	month	days	blood

If the _____ is not fertilised, it is expelled to the outside of the body through the _____, accompanied by a small amount of _____ and tissues.

This natural process is called _____ and happens once a _____ about every 28 days. It can last two or three _____ until a whole week.

TASK 9: WHAT HAPPENS AFTER FERTILISATION?

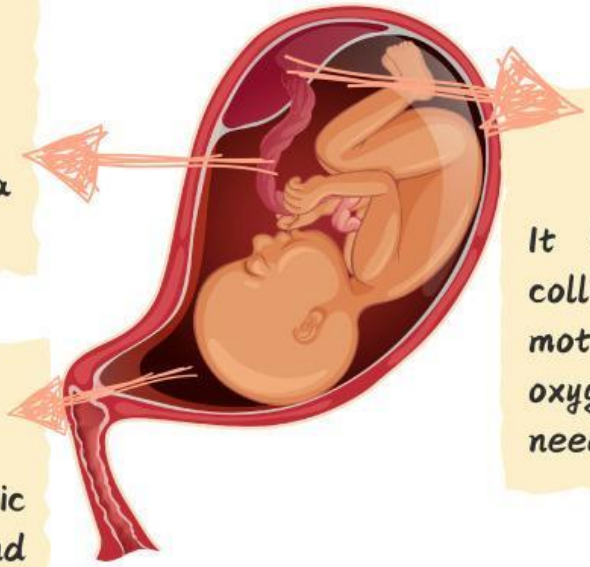
At the beginning of pregnancy, two essetial organs for the fetus are formed: the placenta and the amniotic sac.

Look at the picture and label it with the following words.

umbilical cord	amniotic sac	placenta

It joints the placenta to the fetus.

It contains the amniotic fluid that surround and protects the embryo.



It is a tissue that collects, from the mother´s blood, the oxygen and nutrients needed by the embryo.
