ACTIVITY 8:

1.Which of this best describes what weather is?

A: Weather is when rocks are smoothed over a long period of time.

B: Weather is the time of day.

C: Weather is the daily conditions of the air and the sky.

==========

2. What scale do we use when measuring temperature?

A: Kilometers

B: Hours

C: Celsius

3. Which weather measurement is the amount of water vapor in the air?

A: Temperature

B: precipitation

C: Humidity

==========

4. Which of the following can affect the weather?

A: A weather forecast

B: The geographic location

C: Airplanes

==========

5. Which weather pattern is measured in kilometers per hour? (km/hr.)

A: windspeed

B: humidity

C: temperature

LIVEWORKSHEETS

6. Which weather pattern is measured in millimeters (mm)?

A: temperature

B: precipitation

C: humidity

==========

7. Which weather pattern is measured as a percentage (%)?

A: windspeed

B: humidity

C: temperature

==========

8. If the weather forecast says there is a high chance of precipitation. What weather would you expect?

A: rain

B: clear sky's

C: hot air

==========

9. When the humidity is high the air feels.....

A: Dry

B: Hot

C: Damp

==========

LIVEWORKSHEETS

10. Which day will have the highest humidity?

Day	Temperature	Humidity
Monday	33°C	40%
Tuesday	31°C	48%
Wednesday	34°C	10%
Thursday	32 °C	2%

A: Monday

B: Tuesday

C: Wednesday

D: Thursday
