## Reading Text: "Meet the Robots!"

Robots are machines that can do many different jobs. People make robots to help in homes, workplaces, and even hospitals. Some robots are small and simple, while others are big and very advanced.

**Home robots** help with everyday tasks. They can clean the floor, wash the dishes, or even play music. Some robots can answer questions or turn on the lights. These robots make life easier and more fun at home.

**Factory robots** are strong and fast. They work in big buildings called factories. These robots help make cars, phones, and other products. They can lift heavy things, paint parts, or pack boxes. Factory robots work quickly and don't get tired.

**Medical robots** help doctors and nurses in hospitals. They can carry medicine to patients or assist in operations. Some robots have cameras and tools to help doctors see inside the body. This helps doctors do their jobs better and more safely.

Finally, some robots are made just for fun. These are **entertainment robots**. They can dance, talk, play games, or even act in movies! People enjoy playing and learning with them.

Robots are becoming smarter every year. In the future, they may help even more in our daily lives!

## Exercise 1: Match the robot to what it does

| Robot Type | Job |
|---|---|
| 1. Home robot | A. Assists in hospitals and carries medicine |
| 2. Factory robot | B. Dances, plays games, or acts in movies |
| 3. Medical robot | C. Cleans, plays music, or answers questions |
| 4. Entertainment robot | D. Builds cars and packs boxes |

---

## Exercise 2: Match the words with their meanings

| Word | Definition |
|---|---|
| 1. Machine | A. A fun robot that talks or plays games |
| 2. Factory | B. A tool made by people to do work |
| 3. Hospital | C. A place where robots or people make things |
| 4. Entertainment | D. A building where doctors help sick people |
| 5. Robot | E. A machine that can do tasks like a person |
